

# Wiring up ion traps for quantum information

Hartmut Häffner

*Department of Physics, University of California, Berkeley*

*Institute for Quantum Optics and Quantum Information, Innsbruck, Austria*

Motivation

Ion-wire interaction

First experiments

Summary

# Quantum bits

Two level system:

# Quantum bits

$|0\rangle$

$\alpha|0\rangle + \beta|1\rangle$

$|1\rangle$

# Why quantum information ?

Schrödinger equation for 300 interacting spins.

Classical computation needs more bits than there are atoms in the universe.

→ Quantum computers can solve certain tasks much more efficiently than classical computers.

Allows a new view on nature: reduction to information

# Experimental challenges

Some examples of quantum control:

- Stern-Gerlach experiment

- NMR

- SQUIDs

- Bose-Einstein condensates

Full control of complex quantum systems is quite difficult.

# Ion trap quantum computing

Trapped ions form the  
quantum register

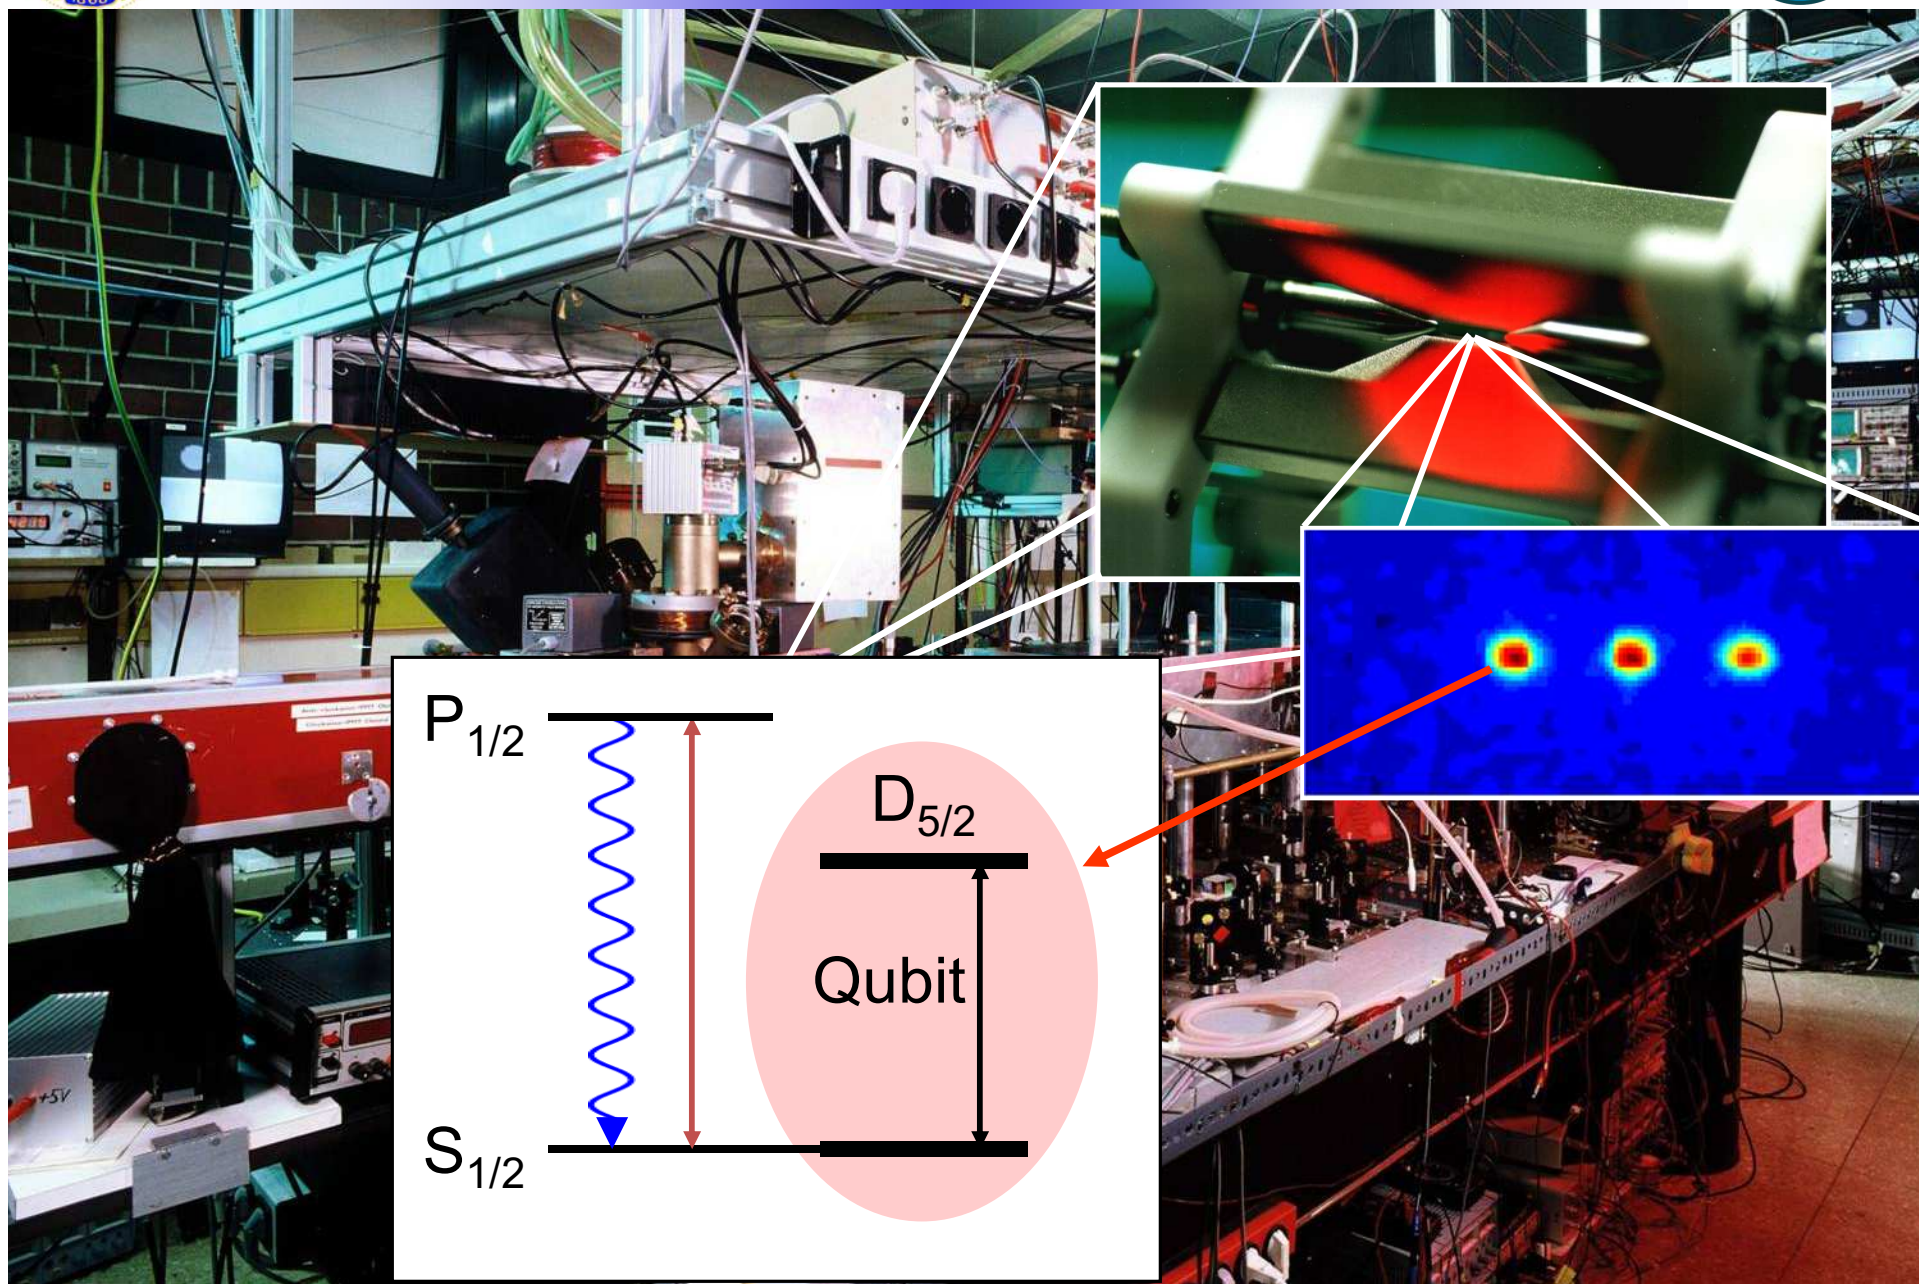

Trap electrodes

# Ion trap quantum computing

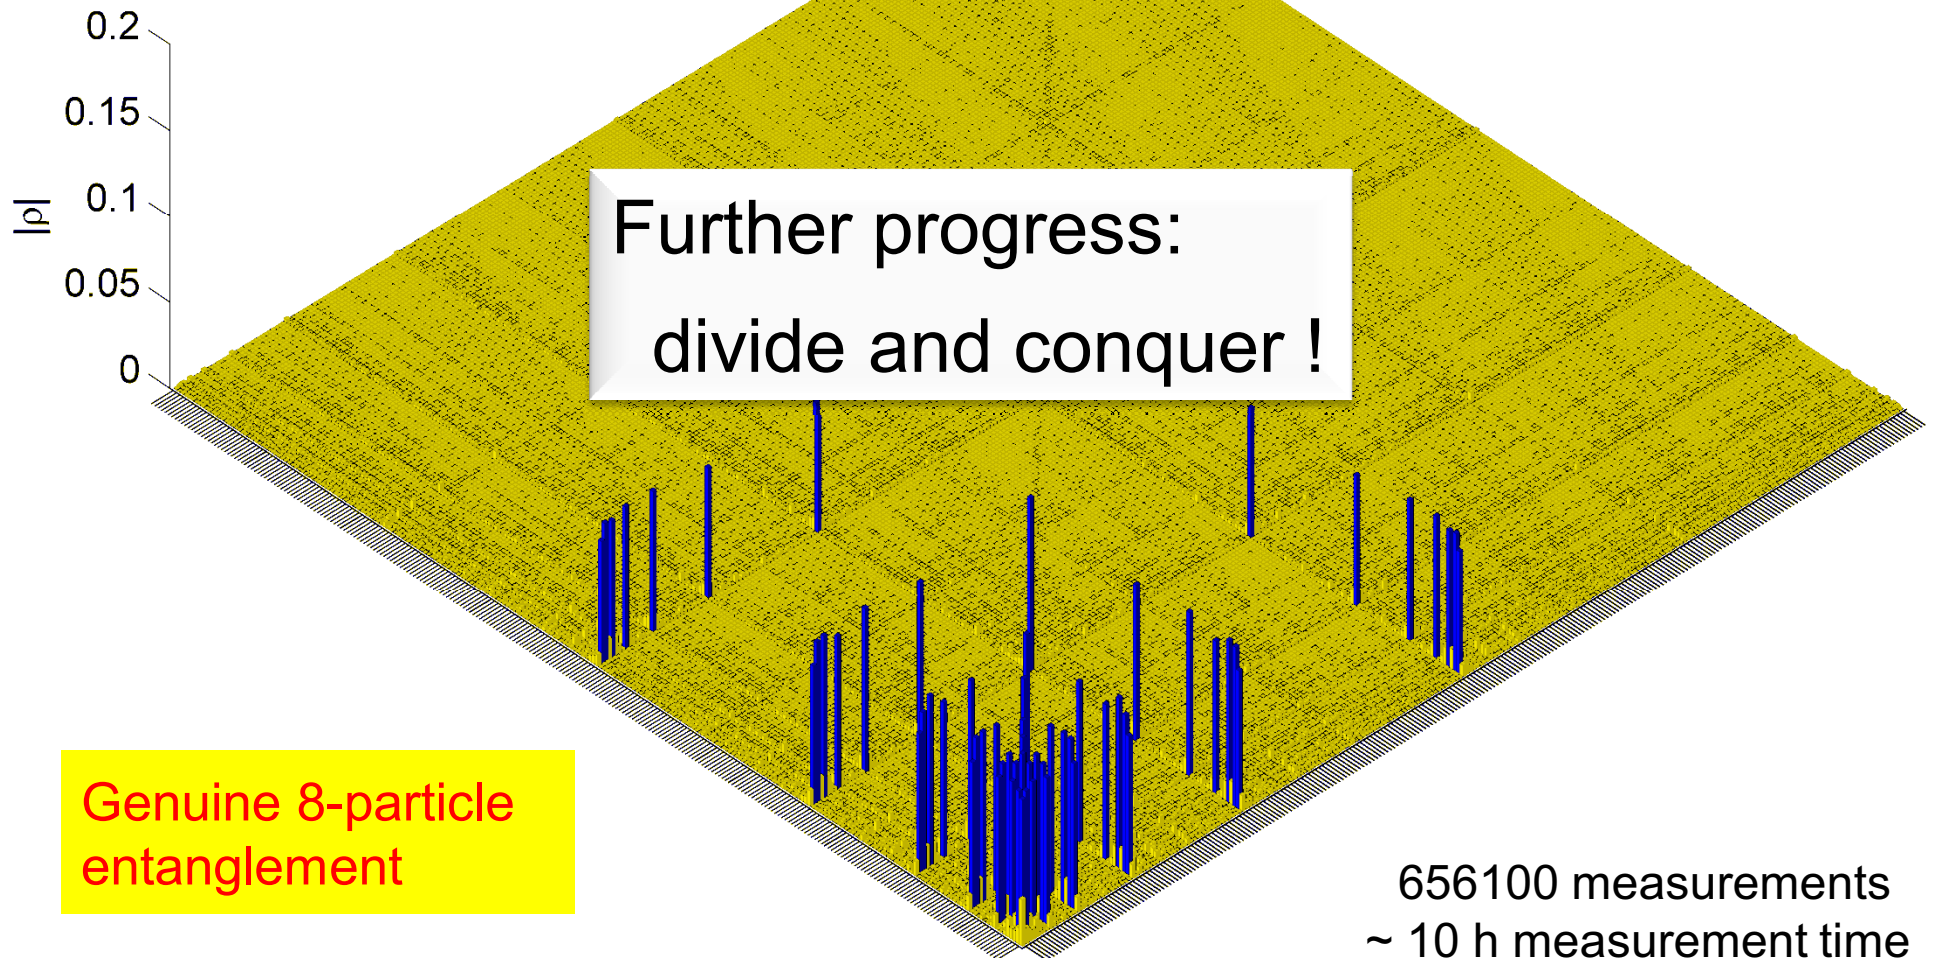

# Eight particle entanglement

$$\frac{1}{\sqrt{8}}(|DDDDDDDS\rangle + |DDDDDDSD\rangle + \dots + |SDDDDDDD\rangle)$$

Häffner et al., Nature **438**, 643 (2005)

# Scaling of ion trap quantum computers

Cirac, Zoller, Kimble, Mabuchi

Zoller, Tian, Blatt

# Scaling of ion trap quantum computers

# Wiring up trapped ions

Two trapped ions ...

## Wiring up trapped ions

Two trapped ions + a wire

# Wiring up trapped ions

Transport of quantum information

# Wiring up trapped ions

No trace of the quantum information should remain in the wire

→ ~~superconducting wire~~

# Physics with this set-up

## Physics:

- Decoherence in charge transport
- Wire mediated laser cooling to a few  $\mu\text{K}$
- Cooling of LC resonators

Heinzen and Wineland, PRA PRA **47**, 2977 (1990).

## Technology:

- Scalable quantum computing with trapped ions/electrons
- Hybrid quantum computing
- Quantum detectors

Quantum control

**Ion-wire interaction**

Experiments

Summary

# Ion-resistor interaction

# Ion-resistor interaction

# Coupling

$$\text{with } I = \frac{q}{D}\dot{x}, \quad L_{\text{ion}} = \frac{mD^2}{q^2}, \quad C_{\text{ion}} = \frac{1}{\omega^2 L_{\text{ion}}}$$

$$\text{Energy exchange rate: } \frac{1}{T} = \frac{1}{2\pi} \frac{q^2}{mD^2} \frac{1}{\omega} \frac{1}{C_{\text{wire}}}$$

D.J. Wineland and H.G. Dehmelt, J. Appl. Phys **46**, 919 (1975).

D.J. Heinzen and D.J. Wineland, PRA **47**, 2977 (1990).

# Coupling

Projected numbers:

$$D_{\text{eff}} = 3.6 \times 50 \text{ } \mu\text{m}$$

$$\omega = 2\pi \times 500 \text{ kHz}$$

$$C_{\text{wire}} = 6 \text{ fF } (l_{\text{wire}} = 0.5 \text{ mm})$$

$$\gamma = 2\pi \times 100 \text{ Hz}$$

# Coupling

Current numbers:

$$D_{\text{eff}} = 3.6 \times 300 \text{ } \mu\text{m}$$

$$\omega = 2\pi \times 500 \text{ kHz}$$

$$C_{\text{wire}} = 120 \text{ fF } (l_{\text{wire}} = 1\text{cm})$$

$$\gamma \text{ would be } 2\pi \times 0.14 \text{ Hz}$$

Projected numbers:

$$D_{\text{eff}} = 3.6 \times 50 \text{ } \mu\text{m}$$

$$\omega = 2\pi \times 500 \text{ kHz}$$

$$C_{\text{wire}} = 6 \text{ fF } (l_{\text{wire}} = 0.5\text{mm})$$

$$\gamma = 2\pi \times 100 \text{ Hz}$$

# Decoherence

## Dissipation in the wire

Trap parameters:  $\omega = 2\pi \cdot 500 \text{ kHz}$ ,  $D = 3.6 \cdot 50 \mu\text{m}$ ,  $R = 0.1 \Omega$

Induced current: 
$$I = \frac{q}{D} \dot{x} = \frac{q}{D} \sqrt{\frac{\hbar \omega}{m}} \approx 10^{-16} \text{ A}$$

Dissipation rate for motional quantum: 
$$\gamma = \frac{I^2 R}{\hbar \omega} \approx 10^{-6} \frac{1}{s}$$

But what about Johnson noise?

# Decoherence

## Dissipation in the wire

Trap parameters:  $\omega = 2\pi \cdot 500 \text{ kHz}$ ,  $D = 3.6 \cdot 50 \mu\text{m}$ ,  $R = 0.1 \Omega$

Induced current: 
$$I = \frac{q}{D} \dot{x} = \frac{q}{D} \sqrt{\frac{\hbar \omega}{m}} \approx 10^{-16} \text{ A}$$

Dissipation rate for motional quantum: 
$$\gamma = \frac{I^2 R}{\hbar \omega} \approx 10^{-6} \frac{1}{s}$$

## Johnson noise heating

Heating rate : 
$$\gamma_J = \frac{P_J}{\hbar \omega} = \frac{k_B T \gamma}{\hbar \omega} \approx 14 \frac{1}{s}$$

Expected coupling over 0.5 mm:  $2\pi \times 100 \text{ 1/s}$

# Decoherence

Three coupled harmonic oscillators:

$|ion_1, wire, ion_1\rangle$

# Decoherence

Three coupled harmonic oscillators:

# Decoherence

Anything else ?
